DUAL SECTION EXHAUST AFTERTREATMENT

FILTER AND METHOD

ABSTRACT OF THE DISCLOSURE

An exhaust aftertreatment filter (100) is provided for internal combustion

engine exhaust, and includes an axially extending cylindrical filter roll (106) having
pleated filter media (110) defining a plurality of axially extending flow channels (130),
and having a first open-flow section (142) with open flow channels (140), and a second
filtering section (148) with alternately sealed flow channels (136, 138) forcing exhaust
to flow through (158) the pleated filter media (110). A core section (142) aides filter
regeneration by providing an exothermic reaction. A combination catalytic converter
and filter includes a first catalytic section (142) treated with a catalyst, and a second

filter section (148) with alternately sealed flow channels (136, 138).
